(57) Abstract:

PROBLEM TO BE SOLVED: To provide a coaster which is prevented from being hung up together with a glass, etc., on the coaster even when the glass, etc., is picked up.

SOLUTION: This coaster is composed of plural layers, fiber fabric tightly gathering fibrins on the surface is used for a front layer 2, and a resin sheet is used for a rear layer 3. Between those layers, an intermediate layer 4 composed of a resin sheet forming a lot of projecting parts on its entire surface is interposed on the surface on the side of the front layer 2, and polishing working is exerted upon the rear surface of the rear layer 3.
